

Performance Commentary

Rising trade war tensions and concerns about the global growth outlook characterised the developments in global equity markets in August. So-called low volatility assets now make up a substantial part of the global market cap and we observe record valuation deviations versus our own universe of value equities. In this environment, gold and silver assets look attractive to us as contrarian value investors. Indeed our Canadian miner Roxgold surged to new highs during the month and is a new top-10 position in the fund. We also took the opportunity to buy into Fortuna Silver, a silver miner with a strong balance sheet and best-in-class growth outlook. US communication solution provider Avaya generated positive contributions after reports re-surfaced that they are considering competing buyout offers. Following months of negotiations, CBS and Viacom, both of which are positions in the fund, agreed to merge. We believe this marks the beginning of the process to finally remove the deal-related overhang that has plagued their share prices for the past two years, and instead focus on synergies, attractive valuation and growth potential. Sugar and ethanol producer Sao Martinho was weaker on continued sugar price weakness. However, the stock trades at a compelling free cash flow yield in the mid-term.

The fund is a concentrated global equity fund with a mandate to invest in all cap-sizes, geographies and sectors globally. With our concentrated portfolio of 30-35 core positions, we aim to generate absolute returns at a controlled level of absolute risk.
